

Bolt-On Wedge Mount

Vishwaraj Bolt-On wedge style mount is more suitable for installation on machines subject to large horizontal or vertical forces. This series is used where mounts can be bolted on and firm mounting with the machine is required. This mount provides a secure and reliable bolt connection between the mount and the machine. Preferably on machines with a high axial thrust such as die-casting machines, injection moulding machines, shock testing machines, and cold extrusion presses etc.

Application :

Plastic Extrusion Machines, Pressure Die Casting Machines, Planers, Boring Machine, Shock Testing Machines, and Cold Extrusion Presses and other Industrial Machines.
